Notes:

2008

In 2008 we decided late in the year to use the LAPs.

The first batch were sent out late but a further 60 000 LAPs went out very late.

The SAQA verification on 4 to 5 January 2009 took place before all the LAPs had come in.

DataNET captured the LAPs data.

A decision was made to remark all the LAPs where the learner had achieved less than 40% (that is, had "failed"). These remarked LAPs were returned to SAB&T (Paul Jooste and Sathia). Professor McKay recalls a total of about 16 000 final failures and it is possible that these corrected marks were not used to update the database.

More 2008 LAPs came in during 2009. It is unclear if the data from these was captured. It is possible that they were captured in 2009 as "new learners" and then rejected as being duplicates of "2008" learners.

Are any of the duplicate registrations over the years not an attempt to submit LAPs in the preceding years. I suspect there is a lot of this kind of "duplicate".

Are there any similar false "duplicates" in the later years?
